Sandblasted design
To ensure that your design is properly sandblasted onto the massive glass panels we need you to deliver your design on the panel template (left) as both left and right hand versions. It is important that your design is a complete representation of the result.

Design Rules: Because of the high pressure of sandblasting the minimal possible line thickness is 2mm (8/100 inches), and the minimum spacing is also 2mm (8/100 inches). Text must be translated into, or represented as, vectors. Do not allow your design to infringe on the border around the panel (the area marked in green). Please ensure that the artwork is ready for printing or cutting. **Please send the artwork as Adobe Illustrator or PDF.**

Full Color design
If you'd like to take advantage of this option, **please supply your file as a (certified) PDF.** The document should have a resolution of at least 200dpi at 100% (final format). The print may be blurry at a lower resolution. All text is required in outlines/contours in CMYK (FullColor).

The measurements indicate the visible surface.
For production the extra overlap of the grey area is necessary.

Kees van der Westen Espressonistic Works B.V. cannot be held responsible for disappointing results caused by less suitable files.

Please use WeTransfer when the file exceeds 5MB.
